

Kvalitetsarbeid i kommunen

Fastleger, kommuneoverleger og kvalitetsarbeid...

- Å lede leger er som å gjete en flokk katter...
- Kommunelegen er alltid opptatt...
- Fastlegene bryr seg kun om eget kontor og penger...

Prosjekt med fokus på forskrivning av vanedannende legemidler

- I medarbeidersamtaler oppga «alle» fastlegene rekvirering av vanedannende legemidler som ei utfordring.
- Dette ble fulgt opp i ALU-møte hvor man besluttet en «fellesinnsats» på området.
- Målet var å sikre riktig rekvireringspraksis over «hele fjøla».

Abstract

Introduction

Quality improvement (QI) clusters have been established in many countries to improve healthcare using the Breakthrough Series' collaboration model. We investigated the effect of a novel QI approach based on this model of performed medication reviews and drug prescription in a Norwegian municipality.

Methods

All 27 General Practitioners (GPs) in a mid-size Norwegian municipality were invited to join the intervention, consisting of three peer group meetings during a period of 7–8 months. Participants learned practical QI skills by planning and following up QI projects within drug prescription practice. Evaluation forms were used to assess participants' self-rated improvement, reported medication review reimbursement codes (MRRCs) were used as a process measure, and defined daily doses (DDDs) of potentially inappropriate drugs (PIDs) dispensed to patients aged 65 years or older were used as outcome measures.

Hva mer har vi gjort?

- Prosjektarbeid i samarbeid med SKIL for å øke vaksinasjonsdekningen av pneumokokkvaksinering og influensavaksinering i risikogruppene.
- Alle fastlegekontorene har gjennomført felles SKIL-kurs i «Kloke valg».
